Specialised Air Motors & Transmission (SAMT) - incorporating TONSON - was founded in 1966 and provides efficient solutions and equipment to all major industries including mining, chemical, food, paper, plastic, power transmission, manufacturing and pharmaceutical.

Our commitment to you is best service, quick lead times and very competitive prices.

Innovation & Quality

Specialised Air Motors & Transmission is committed to providing clever solutions for all hazardous environments and continues to develop smart ways to meet requirements from all different industries; our products meet CE standards ISO9002, ISO9001 and patents are registered globally including USA, Taiwan and China.

Unlike other conventional methods our products mainly use air instead of electricity as the source of power. This eliminates the chance of electricity shock and fire, which are the most crucial factors for industries involved in chemical, flammable or volatile contents.

Specialised Air Motors & Transmission products include air/electric motors, air/electric mixers and air fans which are engineered to meet the highest standards featuring 100% explosion-proof, low air consumption, light weight, high torque, reversible step less speed control, easy maintenance and various mounting methods. And can be used in very harsh conditions such as humidity, high temperature and flammable environments.

Products & Services

SAMT's other popular products include Pressure Tanks up to 200L (with and without integrated mixer), spray guns, pneumatic double diaphragm pumps, vertical pumps, magic drum carriers, non-spark drum openers, propellers, plus many more exciting and innovative products.

We also have the technical capability and expertise to provide complete power transmission solutions to meet your specific requirements, including full engineering assistance with design, selection and site installation. We also specialise in the supply of all types of Industrial gearboxes including Helical, Worm, Bevel-Helical, Bevel, screw jacks and planetary. All are interchangeable with other internationally recognised brands.

SAMT can also customise any product to suit your specific requirements and will investigate the possibilities of developing new products to satisfy your special specifications.

Features and applications

Piston Air Motor features include:

- 100% Explosion-proof
- Stalling Safety
- Step less Speed Control
- Never Burn Out
- Self-Sealing & Cool Running
- Positive Start
- Mounting Flexibility (Flange, Foot, Hub, IEC, Nema, Custom Mounting Available)
- All Plane Operation
- Toleration of Environment
- High Start Torque
- Instantly Reversible
- Rugged Design
- Intrinsically safe in hazardous environment (ex. Mines, Petrochemical, Volatile atmosphere)
- Modular Design: All motors may be equipped with Gear Reducer, Brake, Hand, Remote, Pendant control as options

Piston Air Motor applications are unlimited including:

- Hoist / Winches
- Pump Drives
- Automation Devices
- Hose Reels
- Conveyor Drives
- Choppers / Grinders
- Turntables
- Mixing Equipment
- Food / Pharmacy Packaging
- Lifting Device
- Mining Equipment

Chromium-plated
Also available
Full Stainless Steel Construction

Air Motors have many Patterns and Mounting to meet different application, such as Dual-Shaft (DS), Air Mixer-reserved. Mounting methods including Flange, Foot, Butterfly, IEC, NEMA, and many special flange plates can be customized.

Also other materials:
Stainless Steel & Chromium-plated.

AIR GEARMOTORS

For applications where precise and variable turning power and speed is a requirement. Examples are bolt tensioning equipment or rock drilling rigs, precise lifting, lowering, traversing or turning. Unlike electric gearmotors, no chance of burn-out nor heat buildup with TONSON Air Motors. Direction of rotation is instantly reversible.

M16-FG
w/Reducer

BRAKES

For applications where positive braking is a requirement, a range of caliper brakes is offered. These are designed to withstand full stall torque of the air motor. The brake consists of two spring supplied shoes pressed against a central hub. The shoes are released by applying air pressure to the cylinder/piston assembly. The brake torque can be carried by adjustment of two spring adjusters but it is normally set so that a pilot pressure of 4 bars (60 PSI) will fully release it.

w/ Remote Control
Valve & Brake

VALVE OPTIONS (1/2", 3/4", 1", 1 1/4", 1 1/2", 2")

A range of bolt on Hand Control Valves and Remote Control Valves are available for use on all TONSON Piston Air Motors. Designed to completely eliminate all static friction, thereby reducing hysteresis effect and reverse hand control is required, with spring centre to neutral position by a lever mechanism or controlled by air pilot signal.

Two control styles are manufactured:

i) Equal power and speed in both directions.

ii) Biased to give a degree of control for hoisting applications.

Hand Control Valve

Remote Control Valve
One pilot port, 1/4" on each end.
Caps may be positioned with port at top, bottom or either side.
The pilot pressure range is between 1.4 bar (20 psi) and 4.8 bar (70 psi), increased pilot pressure gives increased speed

Piston Air Motors

A pressure regulator should be used to control the air pressure to the motor, to limit the maximum output torque applied to the driven assembly.

Motor should be operating at speed as close as possible to the speed at which PEAK POWER is achieved to give optimum performance and air consumption.

AIRLINE FILTRATION AND LUBRICATION

Use 64 micron filtration or better.
Inject oil into the inlet port prior to initial start-up.
Lubricator drop rate at 3 to 4 drops/min for continuous operation
Lubricator drop rate at 6 to 8 drops/min for intermittent operation

GENERAL DATA
